

Circles features: Demurrage

This reduces wealth inequality. So progressive tax is part of Circles.

Wealth inequality is a dangerous part of current financial system.

If understood as a tax, then the tax would be negative at first (you get money), but once your balance reaches the threshold of 125.000 Circles, it turns positive (you lose money).

Circles features: Social value

The value of Circles comes from people trusting Circles tokens from people they already trust.

Fig. 4: A basic example of the rule of trust. If Alice trusts Bob, any party in the network holding Bob-CRC can exchange them for any CRC that Alice holds, both those she created and any others in her possession.
