

Re-imagining money

The current money system is suboptimal and often serves the wealthy rather than society at large.

The initial promise of cryptocurrency was to use internet technology to create **new forms of money** with totally different properties.

There are many ways to do that: Bitcoin is one, Circles is another...

Circles features: Money Issuance

Money today is issued by central banks, and private banks who create and lend money for profit.

That made sense when issuing money required **technology that only banks could provide,** but today that's not the case.
